PEW RESEARCH CENTER

Total following of top right-leaning and left-leaning online shows

From a study of 320 online shows with a right-leaning or left-leaning ideological bent. Each circle represents a show with a total following more than 1 million, with circle size proportional to total following as determined with subscriber and follower data collected on February 3, 2025, from YouTube, Spotify, Rumble, Twitch, Kick, Facebook, Instagram, and TikTok.

China surpasses US in research spending – the consequences extend far beyond scientific ranking and clout

Publicado: 24 abril 2026 14:29 CEST

In a span of a few years, China has outstripped the U.S. in scientific publications, spending and patents. AP Photo/Andy Wong

China's rapid rise in science has hit a milestone. The country's investment in research and development has reached parity with – and by purchasing power measures has surpassed – that of the United States, according to a March 2026 report from the Organisation for Economic Co-operation and Development. Both nations have crossed the US\$1 trillion threshold on research spending.

>

The Computer Fraud and Abuse Act (“CFAA”), codified at Title 18, United States Code, Section 1030, is an important law for prosecutors to address cyber-based crimes. As technology and criminal behavior continue to evolve, however, it also remains important that the CFAA be applied consistently by attorneys for the government and that the public better understand how the Department applies the law.

To accomplish these goals, the Department has developed the following policy to guide attorneys for the government in the appropriate considerations for prosecutors contemplating charges under the CFAA.

Digital sovereignty

What does this mean for the EU, and how can it be achieved?

"Europe must now lead the way on digital – or it will have to follow the way of others, who are setting these standards for us...it is about Europe's digital sovereignty, on a small and large scale".

**- Ursula von der Leyen
European Commission
President**

Strengthening Europe's Tech Sovereignty

Strengthening Europe's Tech Sovereignty

Tech sovereignty is Europe's ability to act independently in the digital world by developing and controlling key technologies, data, and infrastructure, while reducing reliance on non-EU providers.

The Tech Sovereignty package

On 3 June 2026, in a major shift in its approach to technology, the European Commission adopted an ambitious set of measures to bolster the EU's digital autonomy.

The package includes:

- two legislative proposals: [the Chips Act 2.0](#) and [the Cloud and AI Development Act](#)
- [the EU Open Source Strategy](#)
- [a Strategic Roadmap for Digitalisation and AI in Energy](#)

[Download the Commission's Communication on European Tech Sovereignty](#)
